

## MODEL US 300PS PROCESSING STATION

**DIMENSIONS:** 29 1/2" W x 55" H x 30" D  
**WEIGHT:** 300 LBS  
**MOTOR:** 1 ½ hp 1725 RPM's  
**ELECTRIC:** 120 Volts, 60 Hz, Single phase, 30 Amp  
**FILTER FAN:** 1600 CFM  
**FILTER SIZE:** 16" X 16" X ¾"

U. S. Cremation Equipment's Model US 300 PS Processing Station creates a safe work environment through a filtration system that recovers dust when transferring cremated remains from the cremator into the Processor and the processed cremated remains into a temporary container or permanent memorial urn.

A stainless steel sorter tray allows for easy separation of ferrous metals from the cremated remains before depositing in the stainless steel processor drum. The drum is equipped with stainless steel blades driven by a 1 ½ Hp motor. The drum lid provides a dust free seal and the entire reduction process takes less than 30 seconds. An exhaust system captures any air borne dust in easily replaced standard sized filters.
